CC 101 – Introduction to Computing

Laboratory Worksheet No. 1 | Week 3: Computer Components I – Hardware (CO2)

"Know Your Machine": Exploring the Computer Unit You Are Using

Name: Jiselle P. Fuedan	**Section: BSCS 1-1**
Computer Unit Used (Desktop/Laptop, brand): FUZION	**Date: 09/16/26**

I. Objectives

At the end of this activity, you should be able to:

- Identify the major hardware components of the computer unit you are using and describe the function of each.
- Use built-in Windows 11 tools to inspect and record your computer's technical specifications.
- Distinguish between input, output, processing, and storage devices on an actual working computer.
- Document your exploration accurately and reflect on what you learned.

II. Materials Needed

- A computer unit running Windows 11 (school laboratory PC or personal laptop/desktop)
- This worksheet (printed copy, or the digital file to fill out and submit)
- Optional: smartphone camera, to photograph the physical unit and ports for your own reference

III. Background

Every computer, whether a desktop tower or a laptop, is built from hardware components that fall into four general categories: input devices (send data into the computer, e.g., keyboard, mouse), output devices (present processed data to the user, e.g., monitor, speakers), the processing/storage unit (CPU, RAM, and drives that compute and hold data), and ports/peripherals (connectors that link external devices to the system unit). Windows 11 also provides several built-in tools — Settings, System Information, Device Manager, and Task Manager — that let you inspect these components without opening the case. This activity uses both direct observation and these software tools.

IV. Procedure

Part A – Physical Inspection (5–10 minutes)

1. Examine the computer unit in front of you. If it is a desktop, look at the system unit (tower/case); if it is a laptop, examine the whole chassis.
2. List all the input devices you can see or that are built in (e.g., keyboard, mouse, touchpad, webcam, microphone).
3. List all the output devices you can see or that are built in (e.g., monitor/screen, speakers, headphone jack).
4. Locate the available ports on the unit (USB-A, USB-C, HDMI, audio jack, Ethernet/LAN, power, etc.) and note what each one is typically used to connect.

Part B – System Identification (Settings)

5. Click Start → Settings → System → About.

6. Record the Device name, Processor, Installed RAM, Device ID, and System type shown under Device specifications.
7. Scroll down to Windows specifications and record the Edition, Version, and OS build.

Part C – Detailed Hardware Check (System Information)

8. Press the Windows key, type System Information, and open it (this runs the msinfo32 tool).
9. On the System Summary page, record the System Manufacturer, System Model, BIOS Version/Date, and Total Physical Memory.

Part D – Device Manager Exploration

10. Right-click the Start button and choose Device Manager.
11. Expand at least six (6) categories — for example: Display adapters, Network adapters, Sound/video/game controllers, Disk drives, Keyboards, Mice and other pointing devices, and Universal Serial Bus controllers.
12. For each category you expand, write down the specific device name Windows lists (this is the exact model of that component in your unit).

Part E – Performance and Storage Check (Task Manager)

Item	Your Findings
Device name	DESKTOP-4MKSC1R
Processor	12th Gen Intel® Core™ i5-12400 2.50 GHz
Installed RAM	16.0 GB (15.8 GB usable)
Device ID	635A5817-6B5D-4DD7-BDB1-0BD91DB6852E
System type (32-bit / 64-bit)	64-bit operating system, x64-based processor
Windows edition	Microsoft Windows 10 Pro
Windows version	22H2
OS build	19045.6456
System manufacturer	Micro-Star International Co., Ltd.
System model	MS-7D48
BIOS version / date	American Megatrends International, LLC. A.E0, 1/11/2024
Total physical memory	15.8 GB

13. Open Task Manager (Ctrl + Shift + Esc) and click the Performance tab.
14. Record the CPU name, base speed, and number of cores; the total Memory (RAM) and its speed; and the Disk type (HDD or SSD) and capacity.

Part F – Software Snapshot (Optional / Bonus)

15. Go to Settings → Apps → Installed apps. List five (5) installed applications and classify each as System

Software or Application Software.

V. Data and Findings

Table 1. System Identification Summary (Parts B & C)

Table 2. Physical Components Observed (Part A)

Component Observed	Type (Input/Output/Storage/Processing/Port)	Description / Observation
Monitor	Output	It displays the visual information on the screen of a computer.
Mouse	Input	A hand-controlled device used to provide input in the desktop computer or laptop.
Keyboard	Input	Input device used for typing letters, symbols, and numbers into the electronic device.
Central Processing Unit (CPU)	Processing	Responsible to run a computer's OS and apps and manage a variety of other computer operations.

Table 3. Device Manager Findings (Part D)

Device Manager Category	Specific Device Name Listed
Display adapters	Intel® UHD Graphics 730
Network adapters	• Realtek PCIe GbE Family Controller • VirtualBox Host-Only Ethernet Adapter • WAN Miniport (IKEv2) • WAN Miniport (IP) • WAN Miniport (IPv6) • WAN Miniport (L2TP) • WAN Miniport (Network Monitor) • WAN Miniport (PPPOE) • WAN Miniport (PPTP) • WAN Miniport (SSTP)

Device Manager Category	Specific Device Name Listed
Sound, video and game controllers	• HD Audio Driver for Display Audio • HD Audio Driver for Display Audio • High Definition Audio Device
Disk drives	TEAM T253256GB
Keyboards	HID Keyboard Device
Mice and other pointing devices	HID-compliant mouse
Universal Serial Bus controllers	• Generic USB Hub • Intel(R) USB 3.20 eXtensible Host Controller - 1.20 (Microsoft) • USB Composite Device • USB Root Hub (USB 3.0)

Table 4. Software Snapshot (Part F, Optional / Bonus)

Installed Application	Classification (System / Application Software)

VI. Realization (Reflection)

In two to four sentences each, answer the following in your own words.

1. What did you discover about your own computer unit that you did not know before doing this activity?

I discover the specific details about the computer including the informations inside the 'device manager' which I don't bring much attention in my own computer.

2. Which hardware component do you think matters most to how your computer performs, and why?

I think the hardware component that matters the most to how my computer performs is the RAM because it is where the data are stored that the computer processor needs to run the application and open files. Therefore, without this the computer could function very poorly and can freeze, lag, or crash applications.

3. How might knowing your computer's hardware and software specifications help you as a future IT/CS professional?

Knowing the computer's hardware and software specifications could help me as a future IT/CS professional in the way of having the appropriate or high quality device for my job because being a professional in a programming field needs a device that could handle the heavy codings.

4. What difficulties, if any, did you encounter while completing this activity, and how did you resolve them?

I did not encounter that much difficulties while completing this activity because the module states the important guides for me to identify the information I need to find.

VII. Scoring Guide

Criteria	Description	Points
Completeness	All tables (1–4) and required fields are filled out.	30
Accuracy	Recorded specifications and device names match what the tools actually show.	30
Realization / Reflection	Answers are thoughtful, specific to the student's own unit, and well written.	30
Neatness & Timeliness	Worksheet is legible/well-formatted and submitted on time.	10
Total		**100**

Checked by: **Score:** / 100
